Web Application Development

Front-end Coding

Sohaib Qadir

Front-End Web Developer | React • JavaScript • Next.js • Tailwind CSS | Building Modern Web Applications | Open to Remote & Freelance Opportunities

Karāchi, Sindh, Pakistan

Summary

I am a Front-End Web Application Developer transitioning from a successful 12-year career in IT infrastructure and system administration into modern web application development. I have completed comprehensive training in HTML, CSS, JavaScript (ES6+), React, Redux, React Router, Next.js fundamentals, Tailwind CSS, Modular CSS, and Supabase, with hands-on experience building responsive and scalable web applications. I enjoy creating clean, user-friendly interfaces and solving real-world development challenges. I leverage AI-assisted development tools, including ChatGPT, Claude, GitHub Copilot, Gemini Code Assist, and AI-powered IDEs to accelerate development, improve code quality, assist with debugging, review code, refactor code, and streamline documentation. My previous experience managing enterprise systems has strengthened my problem-solving abilities, analytical thinking, attention to detail, and ability to work in professional environments. These qualities now complement my software development journey. I am actively seeking remote Front-End Web Development opportunities and freelance projects where I can contribute, continue learning, and build high-quality web applications using modern technologies.

Experience

GBHS

Elementary School Teacher

September 2022 - Present (3 years 11 months)

Tando Muhammad Khan District, Sindh, Pakistan

Associate Consultant Engineers ACE LTD.

Computer System Incharge

June 2020 - August 2022 (2 years 3 months)

Karāchi, Sindh, Pakistan

Initially, I assumed the responsibility of troubleshooting daily software and hardware complaints.

I Subsequently, I restructured the network infrastructure to align with the organization's requirements.

I spearheaded the network upgrade initiative and played an integral role in the planning and design of the Data Center, which included components such as the FortiGate 80F firewall, Ruckus manageable switches, Synology NAS DS1250, HP ProLiant ML 350 server, Accounts GL and HRM server, and a server rack with patch panels.

Within the Ruckus switches, I implemented VLAN segmentation for the LAN.

On the FortiGate firewall, I skillfully configured VLANs and facilitated inter-VLAN routing.

I configured and managed the Synology NAS as a comprehensive storage solution for the organization.

Employing batch scripts and data strategy, I established an automated backup system for user data.

Over time, I transitioned all physically installed servers into virtual machines.

Lastly, I installed and deployed the VMWare ESXi 6.5 server to efficiently manage the virtualized environment.

Plan International

IT Officer

November 2017 - February 2018 (4 months)

Thatha

Responsible to handover the IT equipment (laptops, printers, scanners, internet devices, android mobile devices) in the field and maintain the inventory.
